PROFESSIONAL SUMMARY

Full-stack Software Engineer with 1.5+ years of experience building production web applications using React.js, Node.js, and Java Spring Boot for an enterprise system serving 1,000+ users. Skilled in designing and shipping end-to-end features, from responsive React.js interfaces to REST APIs and database-backed services. Independently designed and deployed DocMind, a Retrieval-Augmented Generation (RAG) AI platform, including vector search infrastructure using pgvector, multi-tenant backend services, and an embeddable chat widget. Comfortable owning a feature from UI through database and deployment.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java, Python, SQL

Frontend: React.js, Redux, HTML5, CSS3, Responsive Design

Backend: Node.js, Java Spring Boot, RESTful APIs, Microservices, WebSockets

Databases & AI/ML: MySQL, PostgreSQL, MongoDB, Vector Search (pgvector), Embeddings, RAG Pipelines

Tools & Practices: Git, GitHub, Agile/Scrum, Unit & Integration Testing, CI Basics

PROFESSIONAL EXPERIENCE

Software Engineer | Tata Consultancy Services

Jan 2025 – Present

- Built and shipped full-stack features across React.js frontends and Java Spring Boot REST APIs for an enterprise system used by 1,000+ internal users, taking features from design through deployment.
- Designed reusable, modular React.js components and centralized state management with Redux, reducing duplicate component code and speeding up new-feature development.
- Integrated and consumed RESTful APIs built on Java Spring Boot, coordinating data contracts with backend engineers to ensure reliable frontend-backend data flow.
- Authored unit and integration tests alongside feature work, reducing production defects and improving release quality.
- Profiled and optimized frontend rendering and API call patterns, improving page load performance by 50–70% on key high-traffic views.
- Collaborated within a cross-functional Agile team (PMs, designers, QA) across 2-week sprints to deliver sprint commitments and resolve production incidents.

PROJECTS

DocMind — AI Document Intelligence Platform (RAG) — React.js, Node.js, Spring Boot, Supabase (pgvector)

- Designed and built a full-stack, white-label RAG chatbot platform end-to-end (architecture, backend services, and frontend), enabling businesses to train a support bot on their own documents via file upload or website crawling.
- Implemented vector similarity search with Supabase pgvector across a large multi-document corpus, improving retrieval relevance and grounding chatbot responses in accurate source context.
- Built multi-tenant backend services (Node.js + Spring Boot) handling document ingestion, embedding generation, and chat request routing across multiple isolated tenant workspaces.
- Designed an embeddable React.js chat widget and an admin dashboard for document management, tenant configuration, and usage analytics.

Shared Canvas — React.js, JavaScript, WebSockets

- Architected a real-time collaborative drawing canvas using WebSockets, supporting multiple concurrent users drawing simultaneously with consistent synchronized state.
- Built a fully responsive React.js UI optimized for low-latency collaborative interaction across devices.

Text Compressor — React.js, JavaScript

- Implemented a lossless text compression/decompression tool using Huffman Coding, reducing text size while guaranteeing accurate data reconstruction.
- Built an interactive React.js frontend visualizing the encoding/decoding process in real time.

EDUCATION

Bachelor of Science in Computer Science

Sep 2021 – Jun 2024

SRM Institute of Science and Technology, Chennai, Tamil Nadu
